REPELLENT FORCES LAW OF GRAVITATION

The mind in its constructive use takes us to our betterment, and also to advancement in knowledge of what we are and what surround us. Schooling promotes our understanding as also to the use of method in our thoughts and discipline in our actions.

Those of us who experience unquenched thirst for learning, never leave our schooling. We absorb whatever knowledge life offers by any means within our reach. As we grow older, we enter upon ideas of magnitude with panoramic points of view. Any thought that carries to wise conclusions, and hypotheses that are supported by logic, become of interest.

In life, it is difficult to withdraw from anything that has become a habit. That is so also with established scholastic canons or rules, that make hard the acceptance of counterposed concepts.
